

Comic Craft — AI Project Planning

Phase 1: Story & World

Story concept and genre

Main characters

Character relationships

World/setting

Overall plot

Chapter/episode structure

Phase 2: Page Planning For each comic page, create a structured specification:

PAGE 01

Purpose: Introduce the protagonist

Panel 1:

- Shot: Wide
- Location: City street
- Characters: Arjun
- Action: Walking through the crowd
- Dialogue: "Another day..."
- Mood: Mysterious
- Visual notes: Rain, neon signs

Panel 2:

- Shot: Close-up
- Character: Arjun
- Expression: Concerned
- Dialogue: —

Panel 3:

- Shot: Wide
- Action: Strange light appears in the sky
- SFX: "BOOOOM"
- Phase 3: AI Generation Use Gemini or another model to turn each page specification into:
 - panel descriptions
 - dialogue
 - captions
 - image-generation prompts
 - character-consistency instructions

- page layout instructions
- Phase 4: PDF Workflow A practical pipeline is:
- Story → Page JSON/brief → AI-generated page → Human review → PDF page → Full comic PDF
- For example, a 20-page comic would have 20 independent page specifications, which makes it much easier to regenerate Page 7 without changing Pages 1–6 or 8–20.
- Recommended page data structure
